Hands-on innovation

FLEXIBLE PERFECT ALIGNMENT

Fast and accurate

With just a simple sliding movement you precision-position the glass panel, reducing the installation time by some 30%. Flex-Fit can be optionally used to install all TransLevel profiles that have a glass thickness of 12 to 31.52 mm.

Simple and affordable

Most traditional systems require you to work from both the balcony side and the void side. Flex-Fit can be fully operated from the balcony side, which is not only safer but also saves you the cost of renting a scaffold or even a tower wagon.

Flex-Fit system

To enable fast and perfect alignment of glass panels, OnLevel has developed the super handy Flex-Fit system. This system helps you position a glass panel in one single operation and at a precision of one millimetre.

OnLevel Flex-Fit is the perfect system for flexible fine adjustment of glass panels. Flex-Fit allows you to adjust the position of each glass panel up to 40 millimetres in relation to the perpendicular.

THE BEAUTY OF FLEXIBILITY

ROCA  stands for quality, design and stainless performance. Since 40 years ROCA Industry is producing stainless products for demanding applications. Our line of glass products combine, function, design with excellent value.
