Why choose for OnLevel?

- OnLevel is the first company in the Netherlands to be KOMO-certified for all balustrades
- VCA-certified
- Lower failure costs by using Building Information Modelling (BIM)
- Direct communication with specialist professionals
- Following your order, we will send you a 3D impression with detailed engineering

Architecture

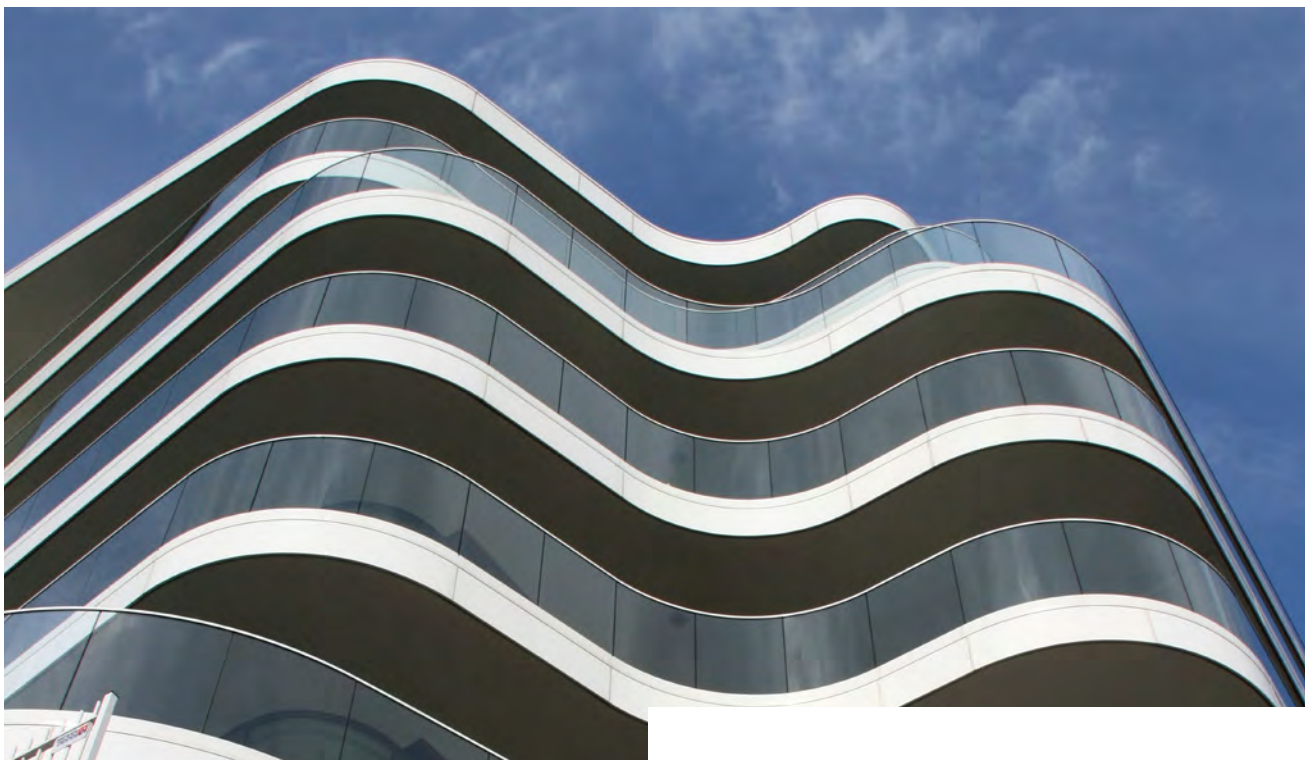

GOLDEN TULIP | ROTTERDAM

Architecture

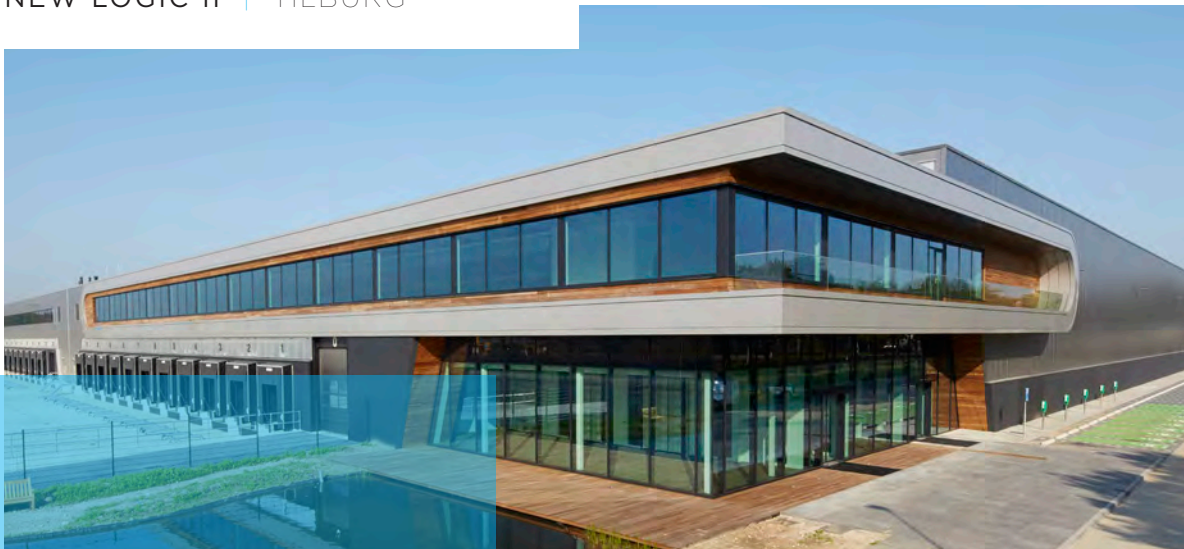

The source of our built environment: architecture. The discipline at the intersection of art and science. Where everything begins and anything is possible. Where every shape is imaginable and possible. An increasing number of architects are using glass balustrades in their designs. That is not so surprising, because glass is attractive, transparent and exciting.

Glass shows everything and conceals nothing. Furthermore, the compressive strength of glass is just as high as concrete provided the forces are well distributed over the surface of the glass. The use of glass as fall protection requires good practical and theoretical knowledge. And OnLevel has that knowledge. In consultation with architects and contractors, we realize high-quality, robust glass balustrades. The examples shown of this page illustrate that together, we can achieve great heights.

Retail

SHOWROOM VAN WANROOIJ | WAARDENBURG

Retail

Nowadays, distinctive quality might just be the magic formula for shopping centres in the fight against the rise of online shopping. By using glass balustrades, the developer creates an environment with a high-quality appearance, in which the public feels safe and can shop in a comfortable, luxurious atmosphere. An additional advantage is that the maintenance-friendly properties of glass and the other materials used greatly reduce the maintenance costs compare to other solutions. Also, the initial investment is surprisingly similar to other solutions. OnLevel would be happy to inform you of the possibilities.

Non-residential construction

OFFICE STEEN INVEST | LEEUWARDEN

Non-residential construction

The non-residential construction sector covers a wide spectrum of buildings with non-residential functions, such as offices, factories, cinemas, hospitals, shops and sports centres. People use these buildings to work, relax, receive care, shop or take part in sports activities. All of these functions require a suitable appearance and an environment in which the user can move safely and efficiently. OnLevel offers excellent glass balustrade solutions within the strict demands that the Dutch Buildings Decree (“Bouwbesluit”) places on these commercial and industrial buildings. Our specialists ensure fast, reliable, trouble-free delivery and assembly, both indoors and outdoors.

Interior construction

OFFICE STEEN INVEST | LEEUWARDEN

Interior construction

Restaurants, bars, theatre foyers, shops and offices: those involved in interior construction face demanding challenges to make large public spaces not only functional, but also stylish. They increasingly make use of sustainable materials and glass, as one of the best recyclable materials, is a great choice. But glass is more than just that. The transparency provides openness, maintenance is simple and effective, and the investment is remarkably competitive. OnLevel's glass balustrades offer a great many unexpected and surprising possibilities. Our products always meet your taste. Affordable and aesthetically pleasing solutions installed by a reliable partner.

Stairs

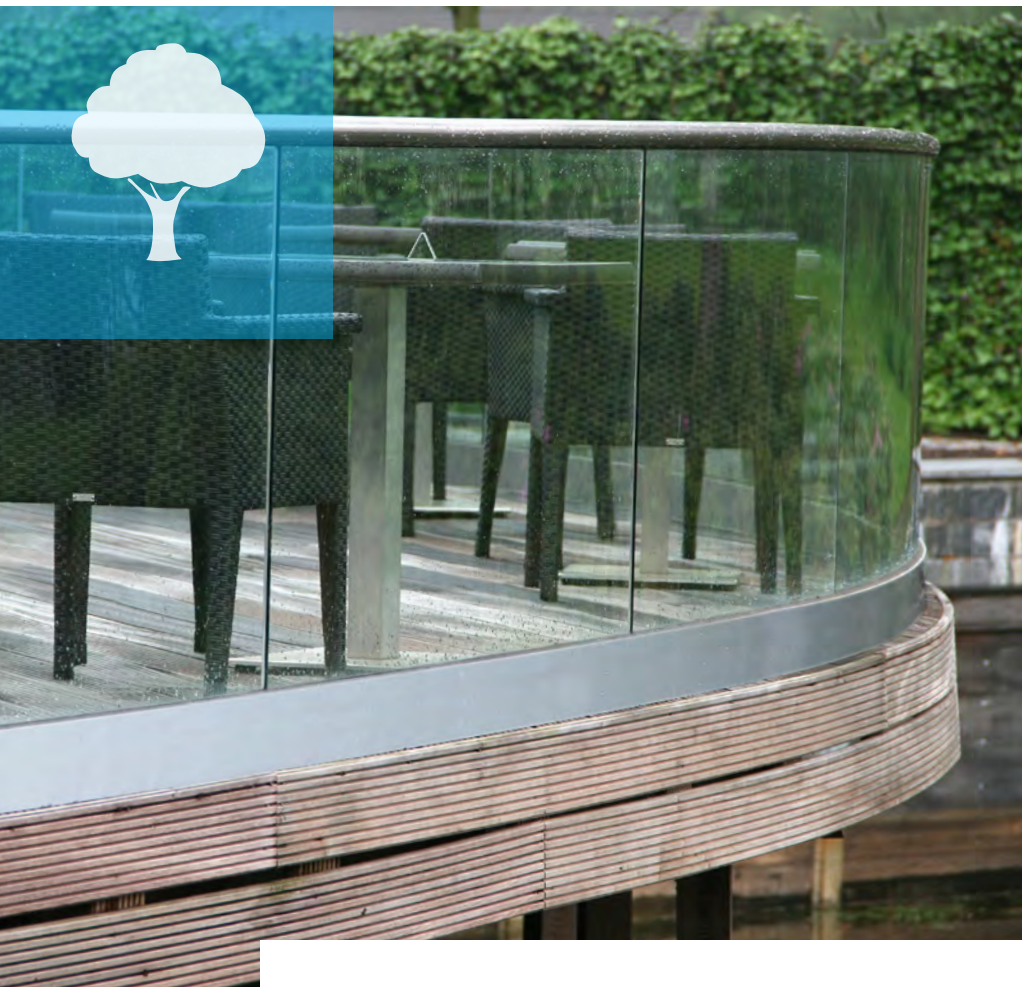

Stairs

Where there are different storeys, there are stairs. And where there are stairs, there are users who wish to go up and down safely and comfortably. Stairs are elements in houses and company premises that set the tone of the building. Do you prefer a standard look with wooden or steel banisters and a traditional railing? Then we will not be able to be of service to you. Or do you want functionality, aesthetics, transparency and safety all in one? Then look no further than OnLevel. We design, produce, supply and install customized design solutions for stair balustrades in every conceivable living or working environment. The transparency of glass creates a spatial effect and the KOMO quality mark guarantees a level of safety that is higher than standard solutions. In other words, OnLevel provides superlative stairs.

OFFICE | UTRECHT

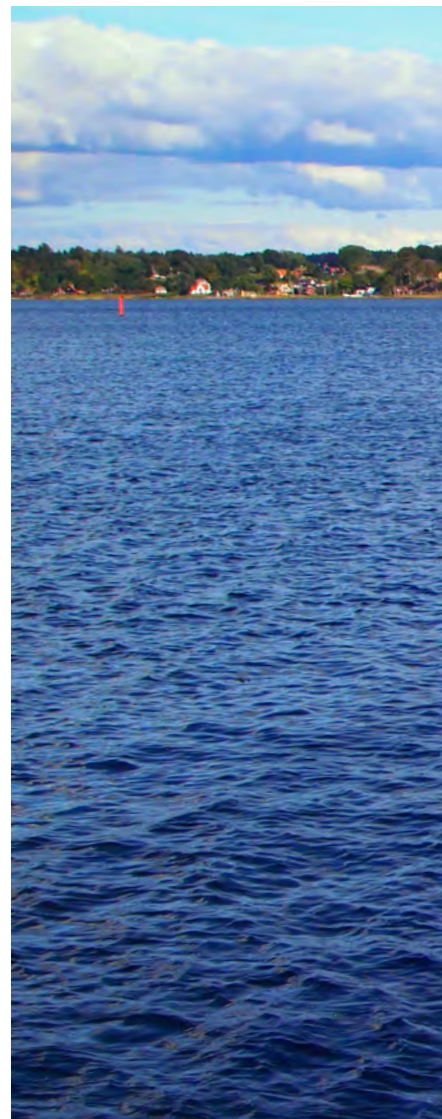

Patio and garden fencings

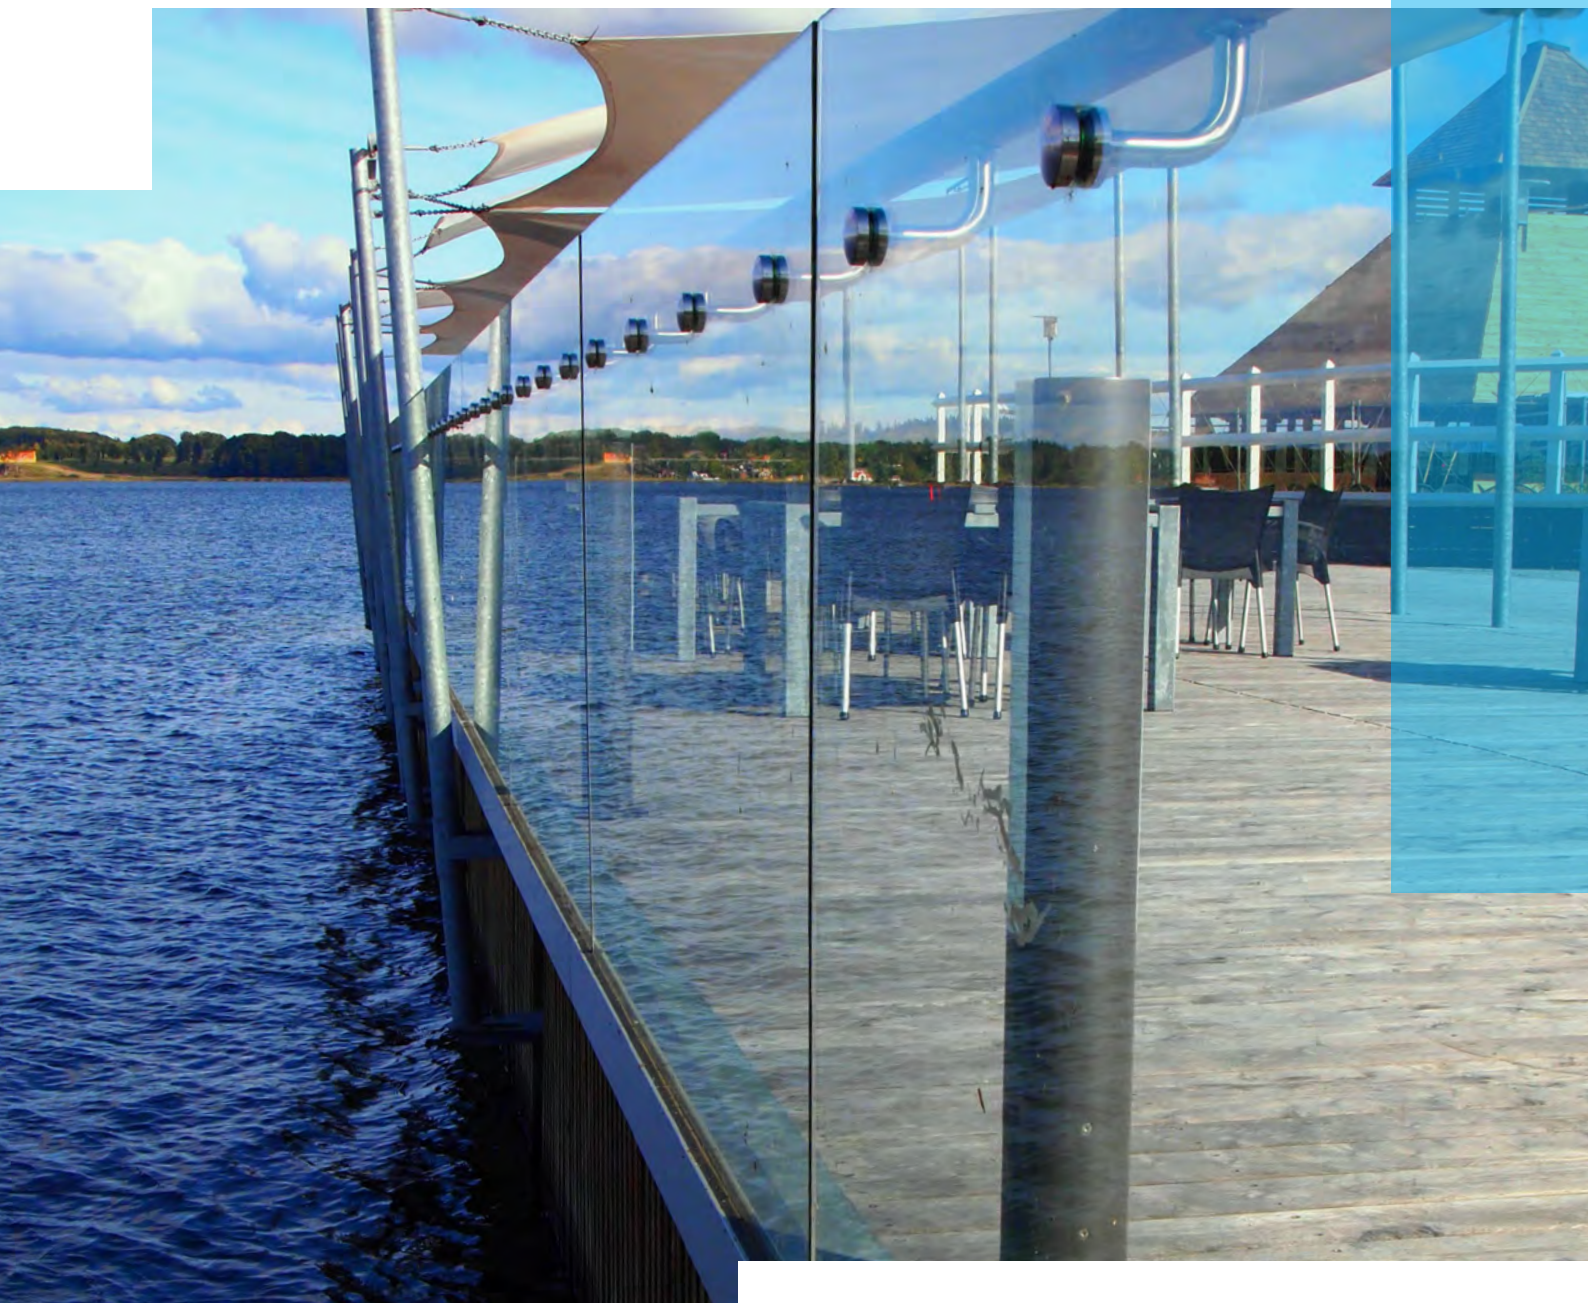

WELLNESS | BUSLOO

Patio and garden fencings

In the last few decades, a real living culture has sprung up in our country. After a busy working day or working week, we want to relax and look to do so together with others. We not only do this indoors, but also outside in the garden or on the patio. We very much enjoy being outside, not just looking outside. And although the strong wind in our country is great for energy generation, it can also be quite annoying if you wish to sit in your garden or on your patio. OnLevel produces innovative, safe glass balustrades to make the outdoors indoors all year round.

PATIO | MARIAGER

RESIDENTIAL AND SERVICE CENTRE PRIENSENIJE | RUINEN

Public space

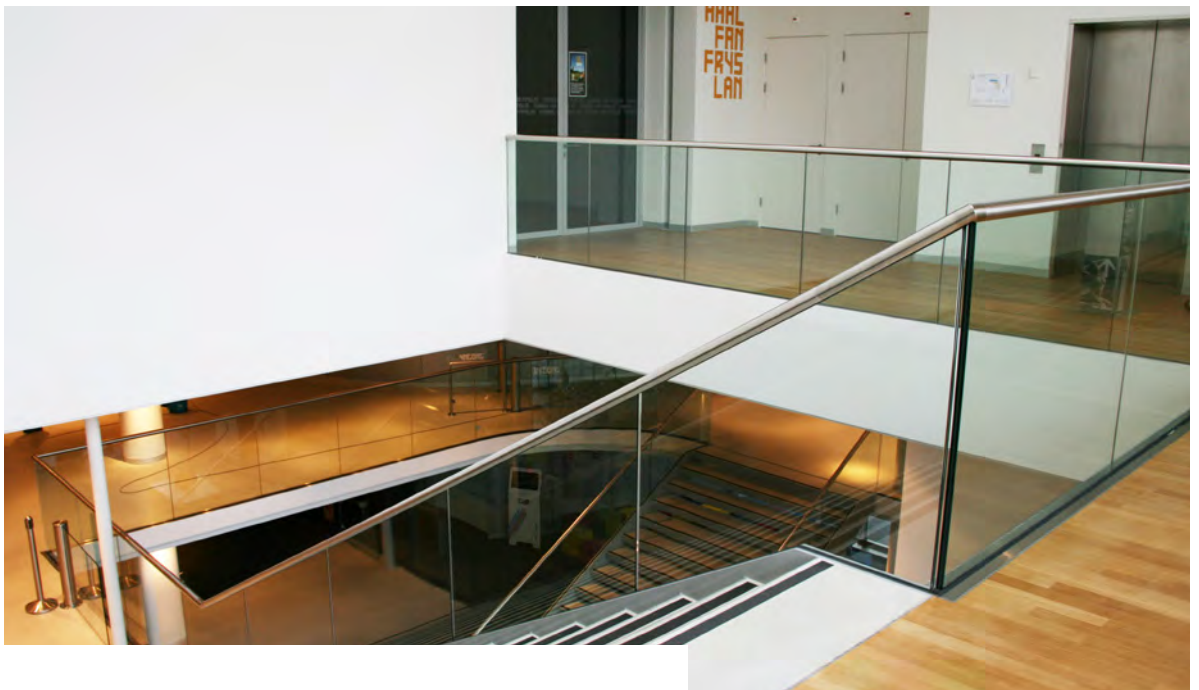

STATION | ANTWERPEN-BERCHEM

Public space

The Dutch Buildings Decree places requirements on the resistance of glass balustrades. These requirements vary depending on the functional purpose of the building or object. Understandably, there are strict requirements placed on glass balustrades in spaces with a public function, such as a railway station, a sports centre or a museum. Using glass balustrades in this type of location offers many advantages. Besides the attractive appearance, a glass solution is thinner than a steel construction and extremely maintenance-friendly, while the investment is similar to other solutions. The transparency of glass also gives users a feeling of safety and spaciousness.

OnLevel's consultants can tell you everything about glass balustrade solutions.

FRIES MUSEUM | LEEUWARDEN

STVV FOOTBALL STADIUM | SINT TRUIDEN

Residential space

DWELLING | AKKRUM

Residential space

Modern, contemporary apartments are increasingly built with attractive balconies or loggias. They expand the living experience and allow residents to enjoy the outside, the sun or the view from their own trusted environment. The use of glass not only provides a wonderful view of the outside, but also provides protection against the elements. You can even sit peacefully on your balcony in a gale force wind. OnLevel designs and delivers high-quality glass balustrades in a wide variety of models and sizes for private residences. Attractive, safe, durable and distinctive solutions. Surprising and different. Always stylish.
